Environmental Certification

Processing Guidelines

Printing guidelines

Allow material to adapt to room conditions for 24 hours before printing. It is recommended to handle the media with cotton gloves. Make sure that the media comes not into contact with grease, oil, silicon, and dirt to avoid printing defects.

Load the media with care in the printers. Incorrect loading can cause skewing or creasing. Use a take-up device to prevent wrinkling.

It is recommended to calibrate the printer before printing and to make a test print. Print results will vary for different printer/ink combinations.

Canon Colour profiles include recommended settings for ink restrictions and printer parameters. Depending on fluctuations in environment, printer, ink, media and applications, printer parameters may have to be adjusted slightly, in order to obtain the best results.

Application guidelines

Always pre-test the surface. The product has been used in many places under numerous possible conditions and has proven its reliability and performance.

The base surface should be carefully prepared:

- Remove all old wallpaper (To remove the remains of old adhesives try using a squirting bottle with water and a few squirts of washing up liquid. This works perfectly on most wallpaper adhesives)
- Remove all remnants
- Smooth out any rough surfaces
- Clean with a damp cloth
- Prior to beginning all surfaces should be dry.

Adhesives

Heavy duty wallcovering adhesive BK 10 (manual) or BK 23 (industrial), or similar PVA substitute.

Washability

In general; Digitally printed wallcovering can be washed. Slight or moderate soiling can be removed using a combination of mild detergent and a damp cloth. Dabbing – certainly not rubbing is recommended to lift the soil. It is important to rinse off with clean water (absorbent) cloth washing in a low to high vertical action to prevent moisture at skirting level. Bleach, abrasive cleaners and similar compounds must not be used.
